Title:

Enjoy the most efficient handwriting experience! Taking notes on the go, whether for inspiration, ideas, knowledge learning, business insights, or even sketches...

Creative notes

By reading we enrich the mind;
by writing we polish it.

StringBuffer in Java ~

```
class Main {
```

```
    public static void main(String[] args){  
        StringBuffer sb = new StringBuffer();  
        sb.append("We Make Dens"),
```

```
        String str = sb.toString();  
        System.out.println(str);
```

 }

String Buffer : mutable sequence of characters

string a = "Rohit"

→ immutable

Advantages : ① Mutable (edit the object or make changes ^{in obj} without creating a new object)

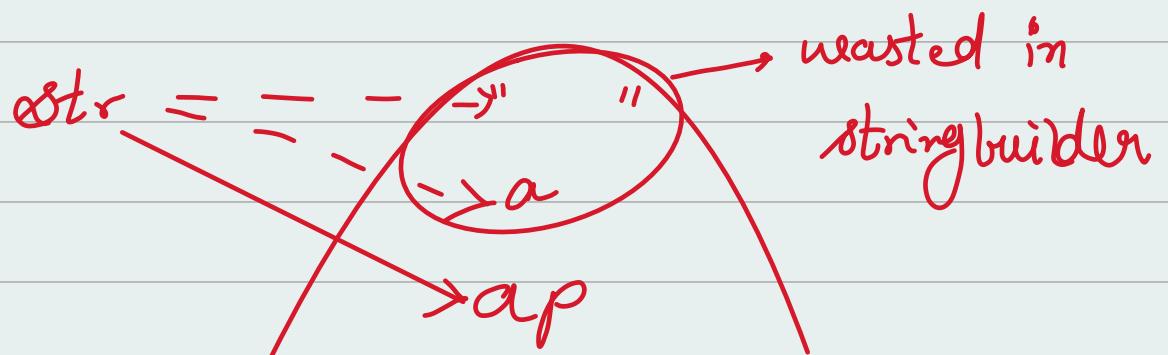

② Advantages over string and it is efficient cause we wont make new objects

③ Thread safe → C slower)

StringBuilder → (Working with multiple threads (process) use string builder).

a = 5

string str = " " + x + p n, p

import java.util.Random;
char ch = (char) randomChar

int randomChar = 97 + (int)(26 * random
float)
